DETAILED ACTION

1. Claims 1 to 22 are presented for examination.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119, which papers have been placed of record in the file.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a) because they fail to show for instance, fig. 1 does not seem to correspond and the following are missing or are not clearly identified in fig. 2: encoder 200, signal mapper 210 and multiplexer 220 as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

4. Claims 1 and 11 are objected to because of the following informalities: the end punctuation mark is missing.
Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 6 10 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6, recites the limitation "transmitted along with one frame" recited on line 2. There is insufficient antecedent basis for this limitation in the claim. Claims 10 and 19 have a similar problem.

Allowable Subject Matter

7. Claims 1 to 5, 7 to 9, 11 to 18 and 20 to 22 are allowed.
8. Claims 6, 10 and 19 would be allowable once the 112 second paragraph rejection is overcome.
9. The following is a statement of reasons for the indication of allowable subject matter:

The instant invention claims a method and an apparatus for creating a (24, 7) code using a Reed Muller code and a puncturer with a predefined puncturing pattern. The instant invention also claims an encoder encoding 7 input bits and puncturing 8 symbols from the symbols received from the encoder.

The prior art made of record teaches creating various codes using a Reed Muller code and a symbol puncturer; however, the prior art made of record fails to teach or fairly suggest puncturing 8 symbols according to the predefined puncturing pattern of

the instant invention. For instance, TSG RAN WG1 Meeting # 17 discloses coding of transport format combination indicator (TFCI) wherein a (32 10) Reed Muller code is encoded and punctured according to 5 symbols for various puncturing patterns for various code lengths. However, the prior art made of record taken alone or in combination fails to teach or fairly suggest or render obvious the novel element of the instant invention. Specifically, the prior art made of record fails to teach or fairly suggest or render obvious an apparatus and a method for puncturing 8 symbols from the 32 symbols provided from the encoder according to a predefined puncturing pattern, wherein the predefined puncturing pattern is selected from the following group:

(0, 1, 3, 7,10,13,15,18)

(0, 1, 3, 7,10,13,15,25)

(0, 4,13,18,20,25,29,31)

(0, 1, 3, 7,10,11,13,16)

(0, 3,10,11,13,15,26,31).

Independent claims 1, 7, 11, 12, 13, 18 and 22 recites the novel element of the instant invention and are allowed for the reasons set forth above. Dependent claims 2 to 5, 8 to 9, 14 to 17 and 20 to 21 are allowed due to their dependency on allowed claims.
